PRESS RELEASE

GT Solar Incorporated – Selects RFgen Data Collection for Implementing Warehouse Bar Code Technology with SAP

EL DORADO HILLS, CA – September 25, 2008 – The DataMAX Software Group, Inc., a leader in Automated Data Collection Software with over 2,000+ installations worldwide, announced GT Solar's decision to purchase and implement RFgen for their inventory and manufacturing management solution. RFgen's SAP Certified Integration Software will launch GT Solar's SAP system to a new level by fully automating their processes which are run by a full Warehouse Management system within the existing SAP environment.

GT Solar plans to utilize the RFgen's warehouse management transactions with their existing SAP system. Specifically, GT Solar is implementing cycle count, purchase order receipts, inventory transfer and inventory location transactions. This implementation of RFgen Data Collection Software is for a 5 user system with plans for expansion in the future. Phase 2 will incorporate many more of the pre-built transactions readily available. RFgen's "open source" transactions facilitate a quick deployment enabling GT Solar to gain complete ownership of their new data collection solution. The main benefits of RFgen that appealed to GT Solar was the ease and flexibility of developing a data collection solution which easily integrated with SAP allowing them to learn how to implement it on their own.

GT Solar Incorporated is an industry leader globally providing essential technology, turnkey manufacturing and equipment solutions across the photovoltaic supply chain. GT Solar's products are used by companies worldwide. From Silicon feedstock production equipment to completed solar cell modules, they handle most aspects of manufacturing as a fabrication expert, equipment maker, system integrator, and as a design partner of custom manufactured PV equipment for commercialization.
